

EXPERIMENT 2

Setting up a Zoho Creator Account and Exploring the Platform Architecture and Interface

Roll Number: 241401020

Aim

To set up and explore a Zoho Creator account, understand its platform architecture, and become familiar with the main interface used to create, deploy, and manage applications.

Platform Explored

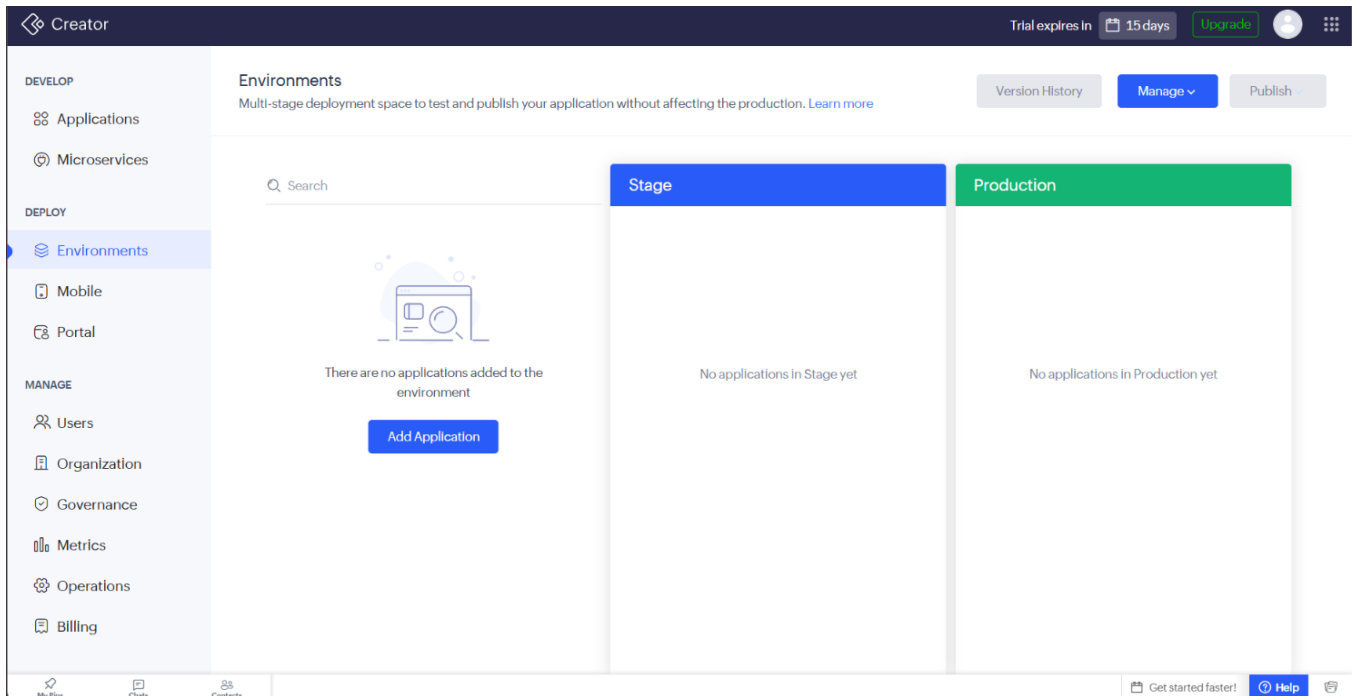

Zoho Creator is a low-code application development platform. The interface provides sections for developing applications and microservices, deploying applications through environments, and managing users, organization settings, governance, metrics, operations, and billing.

Tools / Requirements

- Web browser
- Zoho Creator account
- Internet connection

1. Zoho Creator – Environments

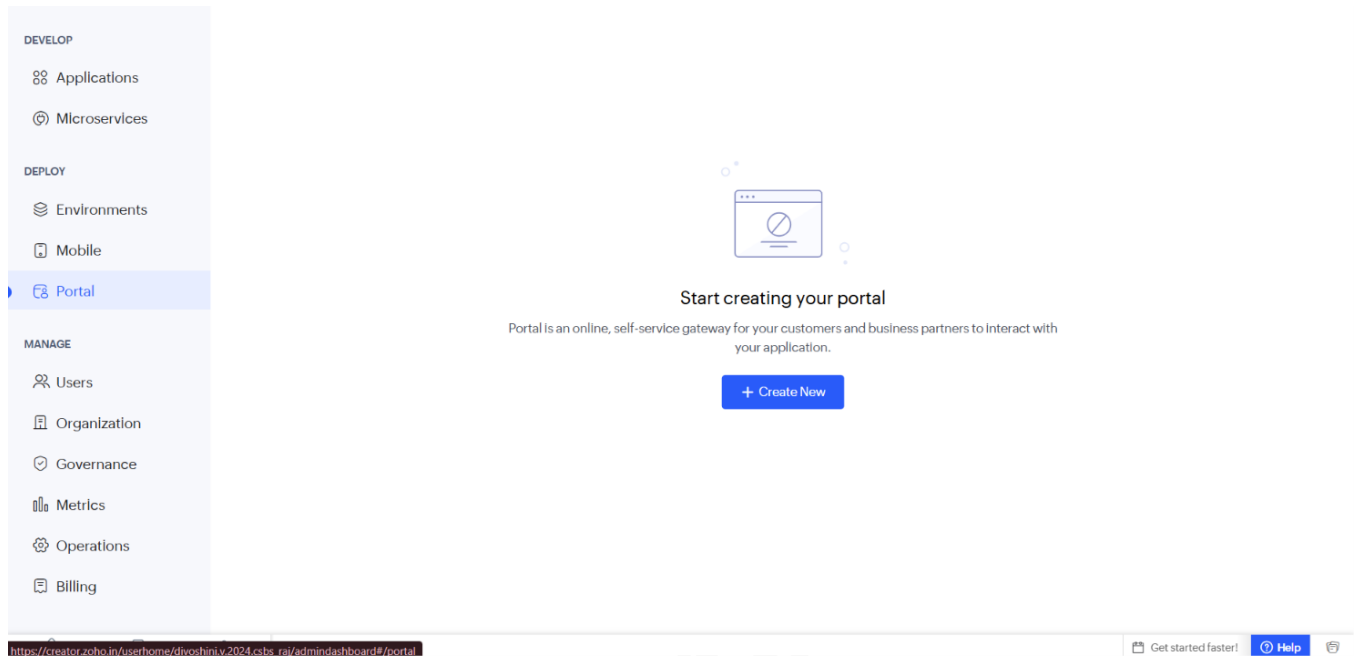

The Environments section provides a multi-stage deployment space for testing and publishing applications without directly affecting production. The interface shown contains Stage and Production areas. Applications can be added to an environment using the Add Application option.

Observation: The Environments page is organized for controlled application deployment, with separate Stage and Production spaces.

2. Zoho Creator – Portal

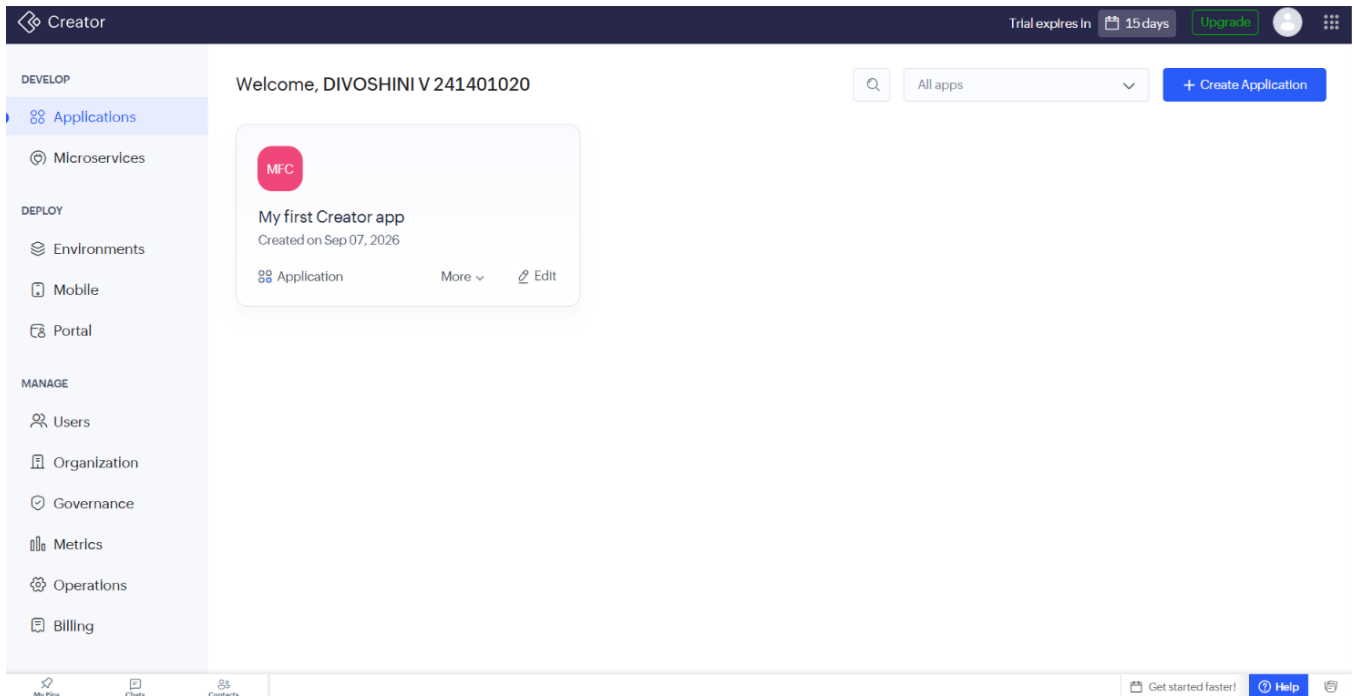

The Portal section is used to create an online, self-service gateway through which customers and business partners can interact with applications. The initial screen provides a Create New option to start building a portal.

Observation: The Portal interface provides a dedicated area for creating and managing a customer-facing or partner-facing gateway for applications.

3. Zoho Creator – Applications

The Applications section is the main development area where applications created in Zoho Creator are displayed. The screen provides options to create a new application and to edit existing applications. The displayed application card also shows its name, creation date, and application type.

Observation: The Applications dashboard provides a centralized view of created applications and gives quick access to create or edit an application.

4. Interface Sections Observed

Develop: Applications and Microservices

Deploy: Environments, Mobile, and Portal

Manage: Users, Organization, Governance, Metrics, Operations, and Billing

5. Procedure

1. Open Zoho Creator in a web browser.
2. Sign in or create a Zoho Creator account.
3. Open the Creator dashboard and explore the Applications section.
4. Create or open an application from the Applications dashboard.
5. Navigate to Environments and observe the Stage and Production deployment areas.
6. Navigate to Portal and observe the option for creating a portal.
7. Explore the available Develop, Deploy, and Manage sections in the left navigation panel.

6. Result

The Zoho Creator account was set up successfully and the platform interface was explored. The Applications, Environments, Portal, and management sections were identified, providing an understanding of the basic architecture and navigation of the Zoho Creator platform.

7. Conclusion

Zoho Creator provides a structured low-code environment for application development, deployment, portal creation, and administration. The explored interface separates development, deployment, and management activities into clearly defined sections.
