

EXPERIMENT – 7

Integrating a Zoho Creator Application with Another Zoho Service Using Connections and APIs

Student Name	Divoshini V
Roll No.	241401020
Application	Vehicle Service & Repair Request Management
Form	Service_Request_Form
Integrated Zoho Service	Zoho Analytics

Aim

To integrate a Zoho Creator application with another Zoho service, Zoho Analytics, by using an authorized connection and API/integration mechanisms so that service-request data can be accessed for analysis and reporting.

Tools / Software Required

- Zoho Creator – for creating and managing the Vehicle Service Request application.
- Zoho Analytics – for receiving, viewing, analysing and presenting service-request data.
- Zoho Creator Connections / API integration facilities – for authenticated communication between services.
- Web browser and an active Zoho account.

Record note: The screenshots attached in this record show the Service_Requests data and its analysis/dashboard view in Zoho Analytics.

1. Concept / Principle

A connection in Zoho provides an authenticated way for one Zoho application to communicate with another service. APIs allow applications to send requests and exchange data using defined endpoints and parameters. In this experiment, the Vehicle Service Request application is connected with Zoho Analytics so that Service_Requests records can be made available for reporting and analysis.

2. Integration Workflow

- 1. Create the source application:** Create the Vehicle Service Request application and the Service_Request_Form in Zoho Creator.
- 2. Prepare the data:** Configure fields such as Owner Name, Email Address, Vehicle Registration Number, Vehicle Type, Service Type, Odometer Reading and preferred service details.
- 3. Open the integration/connection setup:** In Zoho Creator, use the available Connections or integration options to authorize communication with the required Zoho service.
- 4. Authorize the service:** Select the appropriate Zoho service account/permissions and complete authorization. The connection provides the authentication required for API-based communication.
- 5. Transfer/access data:** Use the integration facility or API request to send or expose the relevant Service_Requests data to Zoho Analytics.
- 6. Verify the integration:** Open the corresponding Analytics workspace/report and check that the Creator data is available.
- 7. Create analysis:** Use the imported/available data to generate charts, distributions or dashboards for service-request analysis.

3. Example API / Connection Flow

Stage	Purpose
Connection	Authenticates Zoho Creator with the target Zoho service.
API Request	Sends a request to read, create or update permitted data.
Response	The target service returns a success response or requested data.
Analytics	The service-request records are used to create reports/charts/dashboard views.

4. Verification Points

- The Service_Requests form contains a service-request record.
- The data is visible in the connected Zoho Analytics environment.
- Analytics can identify the available fields and generate visual summaries.
- The integration demonstrates communication between two Zoho services through an authenticated integration mechanism.

5. Screenshot – Zoho Analytics Dashboard / Analysis

The following screenshot shows the Zoho Analytics analysis/preview area for the Service_Requests data. The dashboard suggestion panel and distribution charts indicate that the connected data is available for analysis.

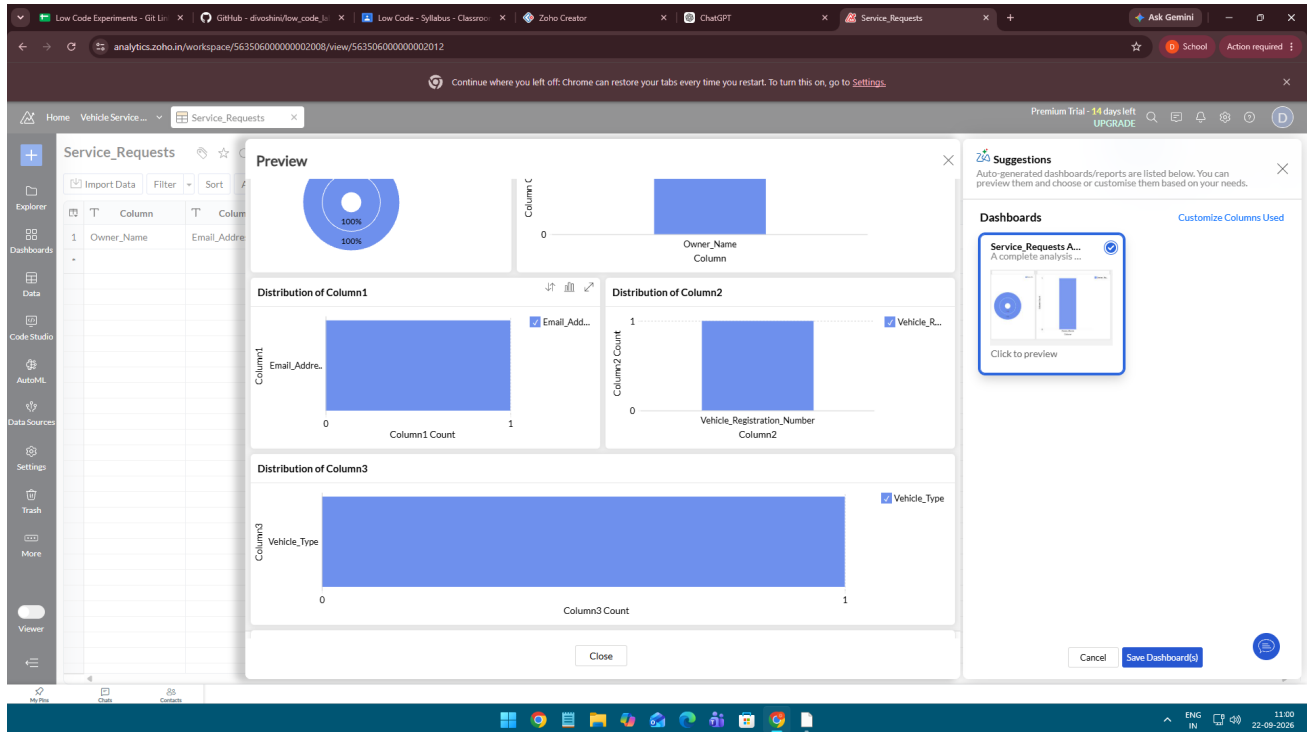

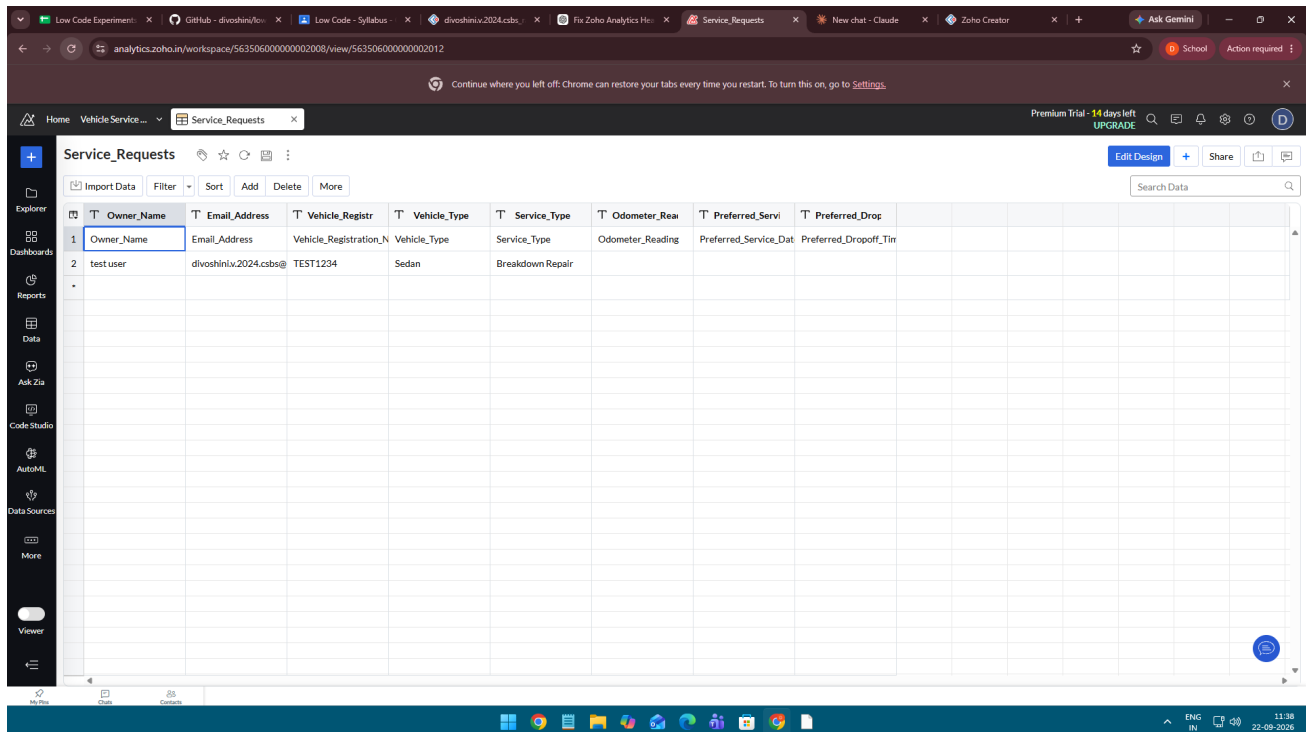

Figure 1: Zoho Analytics preview showing dashboard/analysis generated from Service_Requests data.

6. Screenshot – Service_Requests Data in Zoho Analytics

This screenshot shows the Service_Requests table in Zoho Analytics. A sample service-request record is visible with fields including owner name, email address, vehicle registration number, vehicle type and service type.

T	Owner_Name	T	Email_Address	T	Vehicle_Registr	T	Vehicle_Type	T	Service_Type	T	Odometer_Reading	T	Preferred_Service_Date	T	Preferred_Dropoff_Time
1	Owner_Name		Email_Address		Vehicle_Registr		Vehicle_Type		Service_Type		Odometer_Reading		Preferred_Service_Date		Preferred_Dropoff_Time
2	test user		divoshini.v.2024.cbs@		TEST1234		Sedan		Breakdown Repair						

Figure 2: Service_Requests data table in Zoho Analytics after integration.

7. Result

The Zoho Creator application was successfully integrated with Zoho Analytics using an authenticated connection/integration mechanism. The Service_Requests data was made available in Zoho Analytics and could be viewed and analysed using table and dashboard/visualisation features.
